

BENEFITS AT A GLANCE

- Multi-use price-checking solution that also securely processes payments
- Enables integration of online capabilities with brick and mortar presence through secure browser
- Creates multiple interactive customer touch points storewide
- Mix-and-match devices, common applications platform and a variety of peripherals maximize implementation possibilities
- Built to withstand high-volume usage with durable, scratch-resistant screen

MX800 Series Price Checker

Price Checking and Promotions

The MX800 Series Price Checker is a versatile solution that not only gives your customers a quick and reliable way to check prices, but also efficiently and securely processes payments, provides customers a secure web browser, and effectively delivers dazzling product promotions and electronic merchandising—right to the point of sale or service. Created by combining the MX800 Series omni-directional 1D/2D scanner and thermal printer with any of VeriFone's big, bright MX800 Series payment devices, the MX800 Series Price Checker can also be used to enroll consumers in loyalty promotions, process credit applications, act as a full-service gift card station, and even serve as a handy product locator.

The solution takes full advantage of the different models and configurations available in the MX800 Series—adapting to different screen sizes, keypads or software-based keys—to streamline price lookups and meet state item-pricing regulations. In addition, the MX800 Series Price Checker relies on the same intuitive interface found on MX800 Series devices in the checkout lanes, so customers are already familiar with its look and feel. Specific applications and product pricing database interfaces are easy to create using VeriFone's forms-based tool, web browser interface, or standard Linux tools.

Common Platform. Uncommon Value.

The MX800 Series Price Checker is built on a single, fully integrated platform of modular, mix-and-match, factory- and field-upgradeable devices, operating system, software and applications. Multiple connectivity options, including Power over Ethernet and WiFi capabilities, let you efficiently use and manage multiple touch points in your stores to enhance value. And, as with every VeriFone solution, you can always count on the highest reliability, durability, security, and global support.

MX800 Series Price Checker

PRINTER AND SCANNER SPECIFICATIONS

Scanner

1D and 2D bar codes with omni directional scanning
Serial interface
Optional field-upgradeable module
Dimensions: Length: 182 mm (7.2 in.); Width: 173 mm (6.8 in.); Height: 54 mm (2.1 in.)

Printer

Integrated thermal printer
Graphics capable
Dimensions: Length: 142 mm (5.6 in.); Width: 137 mm (5.4 in.); Height: 60 mm (2.4 in.)
Paper Roll: Standard paper roll 57 mm x 51 mm
Optional label paper roll

Applications

Form Agent, IBM EFT, NCR EFT, Secure browser

Connectivity / Communications

Cable: multi-port cable functionality is integrated into the Price Checker scanner/printer sled
Ethernet: 10/100BaseT
Serial Interfaces: RS-232, RS-485, IBM Tailgate
Power over Ethernet option
WiFi, field-upgradeable module

Features & Benefits

Simply Effective Price Checker

- Powerful, easy-to-use solution combines MX800 Series payment products with scanner and printer to provide product information and prices in seconds
- Omni-directional 1D/2D scanner results in superior read rates
