

BENEFITS AT A GLANCE

- Allows users to select specific Sapphire site controllers and change the selected user password on each Sapphire simultaneously
- For added security, ensures usernames and passwords are not stored in the software or on the PC to help meet PCI-DSS
- All communications between Multi-Site Password Change Manager and the selected Sapphire site controllers utilize secure connection.

Easily Manage PCI Password Requirements

The Multi-Site Password Change Manager (MSP) is a software tool that allows area managers to manage the PCI requirement of updating Sapphire passwords every 90 days. Multi-Site Password Change Manager is a standalone tool that can be used as a Sapphire Management Suite (SMS) add-on.

Features & Benefits

- Multi-Site Password Change Manager eliminates the need to change a user's password manually at each Sapphire site via the Sapphire Management Suite toolset.
- Multi-Site Password Change Manager allows the user to select specific Sapphire site controllers and change the selected user password on each server at once.
- For security purposes, no usernames or passwords are stored in Multi-Site Password Change Manager.
- All communications between Multi-Site Password Change Manager and the selected Sapphire site controllers utilize a secure connection.
- Multi-Site Password Change Manager automatically interfaces with SMS to replace the single-site password change feature of SMS. (requires B164)
- Multi-Site Password Change Manager saves time, money and helps companies maintain PCI-DSS compliance.

Sapphire Software Module

Multi-Site Password Change Manager

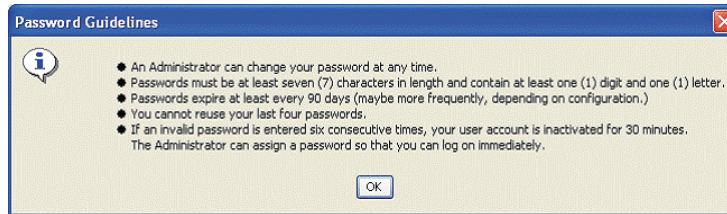

SPECIFICATIONS

PC Requirements:

- Microsoft® Windows® 2000 Professional (SP3), XP Professional, or NT 4.0 (SP6)
- Intel Pentium® 133 microprocessor or faster
- 51 MB hard drive space, 128 MB RAM

Sapphire Requirements:

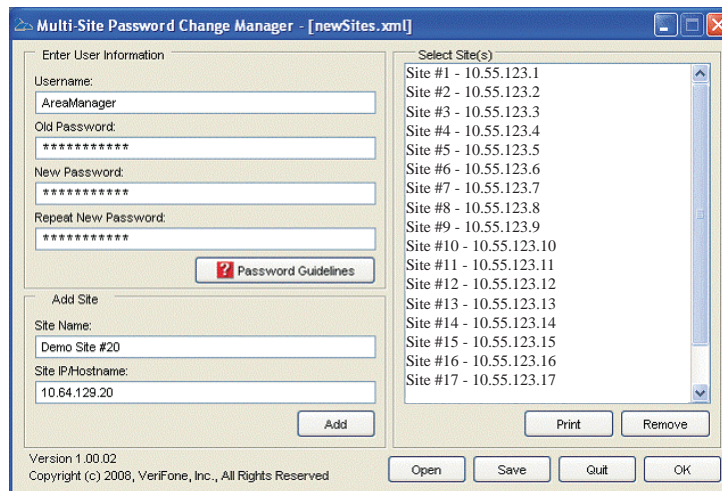

- Base 154 or higher
- SMS Plug-In Functionality - Base 164 or higher
- Must be connected over VPN

The Password Change Manager allows a user to select specific Sapphire site controllers and change the password at all of those sites at once. Before using the Password Change Manager, the following information must be available:

- The username and the password to be changed
- Site names of all Sapphire site controllers to be accessed
- IP addresses or hostnames of all Sapphire Mini-servers to be accessed

Caution: For security reasons, IP addresses and hostnames should be accessible only through an established Virtual Private Network (VPN).

Additional Sapphire Software Module Options:

- [Transaction Set Archiver](#)
Provides a set of scripts used to automate the retrieval of transaction data from one or more Sapphires.
