VeriFone USB-to-Serial Cable Installation Instructions

Software Driver Installation

If you have a CD:

- 1 Insert the CD containing the Driver Software into the CD-ROM drive on your computer.
- 2 Using Windows File Manager, navigate to the CD-ROM drive.

If you need to download the driver:

- 1 Click the following link or navigate your browser to the VeriFone Support Site at: http://www.verifone.com/services/techsupport/files/PL-2303_Driver_Installer.exe
- 2 Click **Save** in the resulting pop-pup window(s) until receipt is verified.

Software Driver Execution

To execute and run the software driver Installation Program:

- 1 Double-click the "**PL-2303 Driver Installer.exe**" file. The subsequent installation process is automatic and requires no user intervention.
- 2 Installation is complete when all pop-up windows close.

Cable Installation and Configuration

To install and configure the cable:

- 1 After the Software Driver is installed, connect the serial end of the USB-to-Serial cable to the corresponding connector (could be DB-9, RJ10, MOD-10, etc. depending on the cable) on the VeriFone device.
- 2 Plug the USB end of the USB-to-Serial cable into an available USB port on the computer.
- 3 In a few moments, the USB cable should be detected. Windows should then indicate that the device is ready to use.
- 4 To set the assigned Serial Port (COMx) number and operating parameters, start the Windows Device Manager (usually accessed via the System Icon in Control Panel).
- 5 Click on the "**Ports (COM & LPT)**" entry to expand the list of ports.
- 6 Right-Click on the "**Prolific USB-to-Serial Comm Port**" entry, then click "**Properties**" in the drop-down menu.
- 7 Click on the "**Port Settings**" tab. The default Baud Rate and Protocol settings can be changed here.
- 8 Click on the "**Advanced**" button. The COM Port number can be set here.
- 9 VeriFone recommends leaving the FIFO settings at their installed default values.
